Education

Jawaharlal Nehru Technological University (JNTU) Anantapur
B.Tech, Electronics and Communications Engineering *2018*

Experience

Thoughtworks Dec 2023 – Present
Senior Consultant (Senior SWE) · E-commerce customer-service platform, team of 14 *Hyderabad*

- Design and build Spring Boot microservices using Domain-Driven Design and Hexagonal Architecture, producing and consuming **millions of events** across teams over Kafka and SQS
- Hold **p50 at 150ms and p90 at 200ms** through a **10x traffic increase (3K → 30K API calls/hour)** since the platform moved from agent-mediated to direct customer access
- Rebuilt disaster recovery as automated Terraform provisioning plus scripted bootstrap, cutting full application recovery from a **6-hour SLA to 3–4 hours**
- Ship to production daily via trunk-based delivery, feature toggles and GitHub Actions with **Trivy and OWASP Dependency-Check** gates; remediate cloud and container vulnerabilities flagged by **Wiz**
- Build and maintain a **multi-agent debugging workflow** that triages production errors from **AWS CloudWatch** logs and traces each failure to its likely root cause for engineers to verify and fix
- Build **GitHub Copilot skills** for code review and Jira-to-spec generation that standardize AI-generated code across the team, which have cut the share of bugs from AI-written code from **40% to 15%**
- Adapt open-source skills to load only the context a task needs, which has cut AI spend from **$80 to $50 per developer per month (38%)**; mentor engineers on when to reject AI-generated code

OpenText Jul 2021 – Dec 2023
Software Engineer · OT2 multi-tenant SaaS platform, team of 8–12 *Hyderabad*

- Sustained **50K+ API calls/minute at 100–120ms** over **600M+ customer records** by tuning PostgreSQL queries and access patterns; met a 2-hour incident-response SLA using **New Relic** monitoring
- Architected **OT2Central**, a 0-to-1 replacement for Admin Center with graphical modelling of applications, tenants and subscriptions; owned it end to end as product owner, full-stack developer and QA
- Built **Admin Center** for multi-tenant tenant, subscription and user lifecycle management with RBAC, and **Entitlement Tenant Services**, the Protobuf-based backend authority for entitlements behind both products
- Delivered an **Azure → GCP migration with zero downtime** as part of the platform migration team
- Upgraded Angular 9 → 17 with no breaking changes and shipped operability tooling (failed-events view, batch-job controls, in-app API console) that removed Postman from the team's daily workflow

Cognizant Technology Solutions Feb 2019 – Jul 2021
Programmer Analyst · IVS Portal, North American automotive OEM *Hyderabad*

- Built backend services in Java 8, Spring Boot, Spring MVC and Hibernate/HQL over Oracle, replacing manual engineering workflows
- Developed REST APIs for file upload/download on Amazon S3 and Spring Integration flows for inter-system communication
- Delivered microservice components with JUnit coverage against SLA-bound release commitments

Projects

Levitas Validators | *Java 17, Maven, GitHub Actions, Maven Central* Apache 2.0

- Zero-dependency Java library that validates and masks Indian identifiers (GSTIN, PAN, IFSC, UPI, Aadhaar) offline; published on Maven Central

Over&Out | *Swift, Apple Vision, Core ML, Core Audio, Accessibility API, Homebrew* GPL-3.0

- macOS menu-bar app that uses on-device camera detection to mute the mic, turn off meeting video and pause media when you step away or take a call, then restores everything on return

ClipHive | *C#, .NET, WPF, AES-256-GCM, Windows DPAPI, Windows.Media.Ocr* MIT

- Windows clipboard manager with AES-256-GCM encryption at rest, offline OCR image search and zero network calls

Technical Skills

Languages: Java, SQL (MongoDB,PostgreSQL, MySQL, Oracle), TypeScript, JavaScript, HTML/CSS
Backend Frameworks: Spring Boot, Spring (Core, Data, MVC, Security), Hibernate/JPA, JUnit
Frontend Frameworks: Angular, React, Vue.js, Single SPA (Micro Frontends), Jasmine
APIs & Protocols: REST, gRPC, Protocol Buffers, OAuth 2.0
Data & Messaging: Apache Kafka, AWS SQS/SNS, MongoDB, DynamoDB
Cloud & DevOps: AWS (EC2, S3, Lambda), GCP, Terraform, Docker, Kubernetes, GitHub Actions, Jenkins
Architecture: Microservices, Event-Driven Architecture, DDD, Hexagonal Architecture, Multi-Tenant Systems, RBAC, HLD/LLD
AI & LLM: LangChain4j, MCP (Model Context Protocol), RAG pipelines
Observability: Splunk, Datadog, New Relic, Grafana, AWS CloudWatch
Security & Code Quality: Wiz, Trivy, OWASP Dependency-Check, SonarQube
Developer Tools: Git, Claude Code, GitHub Copilot
